GARRISON'S STRAWBERRY PLANT CATALOGUE

J. T. GARRISON & SONS

BRIDGETON, CUMBERLAND CO., NEW JERSEY

To Our Friends

Dear readers, it is our aim to do business with the same integrity and truthfulness that we have always upheld heretofore, as we fully realize the fact that our future prosperity depends upon doing justice to our customers, and we always take the utmost precaution to have all our stock true to name and precisely as represented. For several years past we have given our particular attention to the culture of strawberries and the propagation of the same; so our customers can rest assured that in dealing with us, they will not be served with anything but what we consider the best. We make it a practice of first thoroughly testing all varieties which we desire to introduce, and should they prove to be inferior to fruit for profit, we discard them at once.

We grow berries extensively for market ourselves and are therefore aware of the fact that a good berry is cheap at any reasonable price,

while a poor berry is dear as a gift. Bearing this in mind, you can rest assured you will receive the first quality as well as the value of every cent invested. Yet, it should be remembered that while some varieties do well in almost any soil, there are other good varieties that will not, and we considered it an injustice to any new variety that shows some good qualities, to fruit it one season only and then condemn it. A difference of the condition of the soil and weather compared one year with another will cause a difference in the quality of berries. Therefore we think it a wise plan to try a few varieties each year and then you will know what does best in your soil.

Thanking you for your liberal patronage during past seasons and asking a continuance of the same, we are

Faithfully,

J. T. GARRISON & SONS.

PAYMENT—INVARIABLY IN ADVANCE.

Goods sent by express, C. O. D., only when quarter the amount is sent with order, when charges for returning money will be added to the bill. Plants to go by freight must be paid in full before shipment and it is better to send full amount with all orders, as it saves charges for return money. Remittances should be made by money orders on Bridgeton, N. J., by registered letter, by check or by express. Postage stamps taken for fractional parts of a dollar, one and two-cent stamps preferred.

DESCRIPTION.

As nearly every one is acquainted with the old and leading varieties, we shall have little to say of their

description, but we desire to call our readers' attention to a few of the newer varieties that we have listed in this catalogue and which we believe are worthy of a trial by all strawberry growers.

We ship our plants as fast as they are dug and do not keep them lying around after they are out of the ground.

ALL PLANTS FROM NEW BEDS.

Bear in Mind.—That the varieties that we speak highly of from our own personal observation, we have great confidence in, yet your soil may not suit them as well as ours. Again, they may do still better on your soil than on ours and the only way to know what they will do is to try them.

Sweet 16

We believe this to be one of largest early varieties in existence

A variety that produced a magnificent crop of early berries. A brighter color has never been produced. A good bedmaker and heavy yielder. Grows large and as early as Success.

Please make careful study of the cut showing Sweet 16 on first page. We wish it to be distinctly understood that this photograph has been reduced to $\frac{1}{4}$ its actual size. These same berries shown here were sold to the Commercial Hotel, Bridgeton,

N. J., after much handling, for 25 cents per quart. Many visitors to our farms claimed them to be, in their opinion, the best variety as a money producer they had ever seen, and wanted to place their orders for plants at unheard of prices, so as to be sure to have them the coming season. Without exception, the Sweet 16 grows the largest plant that is in existence. Get your yardstick and measure the size of bunch of plants shown in this catalogue.

Kindly bear in mind this cut has been reduced to ¼ actual size.

If upon receipt of plants you do not believe them to be the largest you have ever seen, we will refund your money upon request. A large vigorous plant will surely grow a

make ready sale for them at highest prices. The seeds of Sweet 16 set out on the surface, preventing them from bleeding when in transportation from the friction caused by the jolt. We sold Sweet 16 last season at \$15.00 per 1000 but did

STATE OF NEW JERSEY)
)
CUMBERLAND COUNTY)

Warren W. Garrison being duly sworn according to law upon his oath says that he is a member of the firm of J.T. Garrison & Sons and that the plants shown in the foregoing cut are sixteen in number and that they were taken from solid matted rows and that the plants average one hundred thousand plants to the acre.

Sworn to and subscribed
before me April 22, 1909.

Le Roy W. Loder
Attorney at Law of
New Jersey

Warren W. Garrison

good bed of plants for you if you give it a chance. A large vigorous plant will surely produce large fancy berries if given the proper attention. Their brightness of fruit will sell them anywhere. Their extra earliness and wonderful size will

not have near enough to fill our orders. While we have a large supply this season we are satisfied every plant will be sold. Get your order in as early as possible if you want to be sure of getting them.

Chesapeake Strawberry

This is the greatest late money maker

To our old and new customers we wish to emphasize the many good qualities of the Chesapeake, the Strawberry that we consider the greatest money-making late variety that we have ever seen grown, without any exceptions. The plants are extra large, with great, thick roots. The foliage is thick and leathery, upright leafy stems, with large leaves, almost round, and exceedingly dark-green in color. The fruit

stems are large and hold most of the fruit up from the ground. Perfect blossoms and almost every blossom makes a perfect berry from first to last. The berries are extra large, fine flavor, deep brilliant red in color, ripen all over, and glossy in appearance. The last picking of Chesapeake will average nearly as large berries as our first picking of Gandys, and taking all kinds of weather into consideration we be-

lieve they will outship the Gandy. In fact, we don't believe there is a greater shipper on earth. Last season they brought the highest price of any variety shipped from our station. They will sell in a glutted market. Now it would seem strange if there was a berry that had no fault, and we thought we had found a fault in the Chesapeake, but since we have come to the conclusion that its fault is a blessing. Our usual distance of setting plants is 2 feet apart in the row. We set Chesapeake 2 feet apart in the row and, although it grew the finest and healthiest kind of plants, there were

full width bed, and regularly bedded. One of our best customers, who will pick 35 acres the coming season, paid us a visit a few days ago to look over our plant beds, and when we came to the Chesapeake he said they were bedded just right for a fine crop.

In regard to soil, we have fruited them in low land, stiff clay, where it cracks open; hard gravelly land, and a very light loam, which is almost equal to sand. They did finely in these different soils. We believe they will produce fine crops in any soils where the old Wilson would.

Now our faith is so great in the

little more than half enough, because nature decreed that the mother plant should send out a few great strong runners, making great strong plants, which would grow great large fancy berries. Hence the blessing, providing you set the plants 16 inches apart instead of 24. Who would object to this little extra trouble if a great many extra dollars roll in for the little trouble?

Last season we set our new bed of Chesapeake about 16 inches apart, and as the plants are a long distance apart on the runners and the right number of plants set, it gave us a

Chesapeake that after four years test, and taking into consideration all the varieties that we have to select from to plant for fruit, we shall set one-fourth Chesapeake in 1913. Our advice to you is that you set from one acre on up, even if you have to buy plants, as we feel that they will bring enough more money to pay for the plants, and then have a big profit left over, from plants set from your own beds of the old standard varieties. We have thousands of Chesapeake plants for sale as pure as the day they originated, but we don't expect to have enough

to supply all of our customers. So we would advise you to order at once. We would not sell them at the prices quoted if we had not set them extra thick in row to raise the plants, for it would not pay us. Remember, they are late.

DARLINGTON.

We do not claim to be the originator of this excellent late variety. One of our customers called our attention to this new berry and we were surprised to learn, after careful inquiry in the neighborhood where it was originated, that it would be an impossibility to attempt to introduce a new variety among the people. They were planting Darlington and would plant nothing else. They had been planting them for several years and had guarded it so carefully that it had never, so far as we could learn, passed beyond the boundary of the immediate vicinity. Therefore, we can promise our trade that this variety will be entirely new to them. We are privileged, however, to sell them and to supply those who have not already planted Darlington in the locality where first introduced, as well as elsewhere. We believe the Darlington to be a seedling from Gandy, almost as late as same and larger; a deep red color and good shipper. A variety that grows a large plant and makes a fine bed. To condense the facts, it leads the Gandy a long chase, in size, bed-making qualities and very much so in yield. The only points that are reached by the Gandy are in color and firmness. This is one of our favorites.

EARLY MARKET.

This is a new early berry which originated in N. Y. State, which is highly praised for its earliness, large size, productiveness and fine quality. The lowest price we could get them for last season was \$40.00 per 1000. We haven't fruited them yet. Have made fine plant growth.

FIRST QUALITY.

Not fruited here, but is claimed by one of the greatest berry growers in

the country to be eagerly sought after by those who want a fancy berry and great cropper, and he claims it to be one of the most promising of the newer sorts.

GOLDEN GATE.

A very promising variety. It grows one of the largest, healthy dark-green foliage plants that we have in our collection. The berry is large, too; very large, dark brilliant red in color, with a varnished appearance; good cropper and a great shipper. We advise our customers to give this berry a trial. Our plants are limited of this variety.

GANDY LATE.

This is too well known to need extended description. Large, uniform and attractive. Will not do its best at fruiting time on light, sandy soils. Black swamp land, well drained, or medium stiff land seems to suit it best.

HELEN DAVIS.

Not fruited here yet. The party from whom we got our plants claim the berries are exceedingly large, many of them averaging as large as small sized hens' eggs, fine flavor, and no berry ever produced can out-yield it and its capacity for endurance under trying circumstances shows it to be wonderful. With us it has made an extra growth of fine large plants.

IDEAL.

We have not fruited Ideal yet so will just give you the description that we ordered by: Season, medium to late, a very heavy cropper, berries very large and uniform, the finest berry, the best shipper, the best canner, goes to market bright and crisp; the best looker in boxes and the best seller. Mr. Joseph Haines, the originator of this berry, says: "I have been growing berries for 45 years and bought nearly all of the new ones but never got any one to near compare with Ideal. It is the firmest berry I ever saw and the description is rather underdrawn than overdrawn." We can say for ourselves the plants are great big ones, bedded fine and are a model.

LADY GARRISON.

It is a beauty, of fine flavor, of the best color; ripens up right. It is so glossy that it has the appearance of being varnished. Medium size, a heavy yielder and a fine bed-maker.

MASCOT.

We have never fruited this variety except on Spring-set plants and the berries were so large and productive and fine looking, with such fine plants, that we are very favorably impressed with this variety and believe it to be one of the great ones.

MISSIONARY.

We bought this variety last Spring for the first because one of our customers, who is a grower of acres of berries, had visited another State to see it and he claimed it to be one of the best early, productive and a great shipper and a berry of fine appearance and a great seller. We expect to plant largely of this variety ourselves this season for fruit.

OREAM.

This variety has fine foliage to protect berries from sun. Great large plant, comes in with Gandy, picks after Gandy is gone and far excells them in crop. Berries are exceedingly large and attractive and will stand up long after they are ripe. They are fine as silk. Take our advice and try them. We will run the risk of your fault finding.

O. I. C.

We have not fruited this variety yet, but have great confidence in it, knowing that the introducers sold Mr. W. W. Seward, of Maryland, 75,000 plants, guaranteeing him 4000 qts. per acre under ordinary field culture and we know of a patch that picked last season over 900 qts. per acre one picking or nearly 5000 qts. during the season. While this berry is not claimed to be very large it is claimed to bring more per quart than most other varieties.

SUPERB, FALL BEARING.

We have never had much faith in Fall bearing varieties but after reading Mr. Edward H. Reil's description of the Superb, which said they were

more promising than the others, and that they commenced bearing fruit from the time the plants were well established right on until Oct. 25, we were induced to try them, although we paid at the rate of over \$200 per 1000. Now we set them last April, 1912; they made a fine bed of plants and as soon as young plants became good and strong in season they began fruiting fine size, glossy, brilliant red, highly flavored berries and kept on fruiting for several weeks. This has never occurred with any of our other varieties since we have been in the business on Spring-set plants. We have never seen it fruit after a year's growing but the originator claims it will give a good crop in Spring and then after a rest will commence again and keep on all summer. Order early if you want them as our stock is very limited. P. S.—Edw. H. Reil is president of the Illinois Horticultural Society.

IMPROVED EARLY SUPERIOR.

The Improved Early Superior is a berry of wonderful firmness, with the seeds sticking out on the surface to such an extent that you could dislodge them from the flesh by rubbing hard enough with the fingers. In 1908 we allowed five rows of our fruiting patch to lie unpicked for seven full days after they were ripe and when shipped to New York market they sold at a good price. The color is a brilliant red with varnished appearance and will hold its shiny appearance for days after being picked. From medium to large in size, providing you keep plants thinned out. Commences ripening early and picks late in season. Without a doubt there is more of this variety raised in the great berry sections of Delaware than any other variety, and we also plant acres of them for fruiting ourselves. They are one of the surest croppers in existence.

STEVENS' LATE CHAMPION.

We are the introducers of this famous strawberry that has made a record that has yet to be surpassed as a money-maker, when taken the country over. Is very large, bright color, a fine bed-maker, a heavy yielder, fine foliage, with a good fruit stem. It has been tested on all

SWEET 16

kinds of soil and will grow successfully where any strawberry will grow.

Its name, "Champion," was given it by a lot of berry growers, some saying it would challenge the world.

SUCCESS.

The Success is an excellent early variety, ripening about with the Early Fairfield, large in size, fine flavor, a very bright color, grows a wonderful large stalky plant that makes a good bed of plants. The only fault we find is not being firm enough to ship a long distance. For home market it cannot be excelled. We had so many calls for this variety last season that one large supply of plants was about exhausted, and we set heavily again, in fact more than we had intended, to supply the rush of orders that we have no doubt will follow. It is certainly a different kind of an early berry and we want you to try some of them, you will like them.

THREE W'S.

Three W's we have never fruited yet, but we have reason to believe it to be a great variety as it won highest prize in 1904 at the World's Fair at St. Louis. It is claimed that the fruit is very large and very productive and to keep ten days after picking. Our plants are extra large and we like their way of growing.

UNCLE JIM.

A great big plant, berry exceedingly large, good cropper, medium firm. Anyone who raises berries for home market or own use should have some of Uncle Jim.

WINNER.

This variety which originated in Pennsylvania we have not fruited yet. It is claimed to be very productive, large size, shaped like Haverland, excellent market quality and considered a good general purpose berry. The cheapest we could get them for last season was \$50 per 1000. They have made fine plant growth for us.

CARDINAL.

A. W. Clark, a noted grower of Providence, R. I., speaks of it as follows:

"The Cardinal produces the most beautiful clusters of berries I have ever seen during the 35 years that I have grown strawberries. They were shown in the window of one of my customers on a principal street in the city, where crowds of people halted to admire them. At our Rhode Island exhibition I was awarded for the Cardinal, first prize for the best new variety, first prize for best quart, and the officers of the society were so much pleased with the Cardinal that they awarded me a Certificate of Merit for its large size, good flavor, productiveness, good color, and long bearing, it being the first time such a certificate had ever been given any strawberry by the society. My plants produced berries for three weeks, and the foliage now stands up 12 to 15 inches high, fresh and green."

We fruited this variety for several years. It grows extra large plants with wonderful large leaves, great big pink runners and makes lots of plants. It is a great cropper of fine large well-colored berries and good shippers. You had better order early of this variety, as there is a demand for them.

This is the variety to set when you are troubled with the beetle. Plant some staminate variety with the Cardinal every third row.

BUSTER.

Buster is a cross of the Bubach and the Sharpless. It is of medium size, light red in color, moderately firm, medium to late in ripening. The blossoms are pistillate, but extremely hardy. The Buster gave us a full crop. It is also very vigorous and healthy, having a luxuriant dark-green foliage that defies a reasonable amount of dry weather. This is a variety of long season and a great, great wonderful cropper, but would only try a few at first as they are a little light in color and a little soft.

BIG JOE.

Season, medium to late. Plant is unusually vigorous and long lived, and foliage is clean and healthy. Flower perfect, productive and carries its fruit up well.

Fruit large to very large, and continues large to the end of the season, firm; in form it is obtuse conical.

cal and very uniform in size; red with red flesh; quality good. Very fancy.

CHIPMAN.

This variety originated in Sussex County, Del., by a grower of over thirty years experience, and is considered by him the best he ever fruited. It was first planted for field culture about seven years ago and has always made a satisfactory crop. The plants are strong, upright in growth, large and healthy, with tall, broad, bright, gloss-green foliage, which has never shown any sign of rust or disease. It has strong staminate blossoms and is a good variety to plant with pistillate sorts. The fruit is large, with green caps of even size and shape. It begins to ripen four or five days earlier than the Bubach, and being very firm and retaining its glossy red color well after taking from the vines, all combined makes it a valuable market variety, whether local or distant. It succeeds on both light and heavy soil.

We fruited two acres of Chipman last season. The berries were very large, fine, and sold well.

CLIMAX.

This is what we believe will be one of the standard varieties. It grows a fine crop of fair-sized berries, which are as even in shape as eggs, and ship well; fine color.

BUBACH.

We find that there is a great demand for this old popular variety. When the soil suits it will bear large crops of well-flavored, immense berries; light red, medium firm.

WILLIAM BELT.

This fine berry we consider one of the better class. It usually makes plants freely that are very large and heavily rooted. It is almost as late as the Gandy. Its color is exceptionally fine. It is productive enough to be profitable; the berries are as large as Bubach; with half a show it seems to mature every berry. As for quality, it is of the finest. We have heard of its rusting, but in fruiting it eleven years it has never rusted with us one time yet.

HERITAGE.

Large to very large, dark red in color, medium firm and a great cropper and grows an extra large plant and beds well and there seems to be quite a demand for them.

SAMPLE.

We have fruited this berry five seasons and will say that it is a great cropper, has a deep rich red, glossy appearance, of good quality, from medium to large in size, and is a great plant maker. One of the standard varieties.

SENATOR DUNLAP.

One of the kinds that grow like weeds and should be kept thinned out. They thrive almost anywhere. Berries are of fair size, good cropper, and of the finest quality and richest color.

NEW HOME.

Has great shipping qualities and is a fine berry, but with us grows a delicate plant, while other varieties right beside it are finer this year than we have ever had them before.

IN REGARD TO PRICE.

We offer our different varieties of plants at the lowest prices possible, considering the manner in which we pack them for shipment. They are thoroughly cleaned, roots straightened out and well packed in plenty of live swamp moss. To obtain this result, we pay our employees about double the usual price for such work. We could offer some of these varieties at cheaper prices by handling them carelessly and putting in some plants that should be thrown out, but we consider plants of good quality and well packed cheaper at \$5.00 to \$6.00 per thousand than the same variety of poor quality packed in a hurry would be at \$2.00 per thousand.

Our motto is to hold the old trade and gain new customers.

Always order early, if you wish to be sure of getting what you order, as some of the varieties may be exhausted if you order late. If we are out of the kind you send for, we will, with your permission, send the nearest to the variety you order that we have.

Price List of Plants

Those marked "Imp." have pistillate or imperfect blossoms and should be planted near some sort with perfect blossoms

**NEW JERSEY STATE BOARD
OF AGRICULTURE.**

Office of the State Entomologist.

No. 61, 1912.

New Brunswick, N. J., Sept. 9, 1912.

This is to Certify that I have caused the strawberry nursery stock grown by J. T. Garrison & Sons at Woodruff in Cumberland County, New Jersey, to be inspected in accordance with Chapter 249 of the Laws of New Jersey for 1903. Such plants have been found appar-

ently free from San Jose Scale and other dangerously injurious insect pests, and seemingly in healthy condition.

This certificate expires June 1st, 1913 and is limited to strawberry stock only.

A satisfactory fumigating apparatus is on the premises, and the charge has been determined for the grower.

HARRY B. WEISS,

Acting State Entomologist.

Testimonials

Sweet 16 Were the Largest Plants.

Iowa, Dec. 2, 1912.

J. T. Garrison & Sons,

Sirs:—I was well pleased with the size and good condition of the Sweet 16 plants I received from you last Spring. They were the largest plants I received from your place. I believe they were the largest plants I ever bought. I have tested some 60 varieties. I look forward to some large, luscious fruit from the large, healthy plants that grew from them.

MARTIN F. BRYAN.

Sweet 16 Have Grown Finely.

Kane Co., Ill., Dec. 7, 1912.

J. T. Garrison & Sons,

Dear Sirs:—The 1000 strawberry plants which I purchased of you last spring I received O. K. The Sweet 16 were the largest and finest strawberry plants I ever saw. They have done fine during the summer and I expect a big crop of berries next year. I thank you very much for the fine plants. Yours respectfully,

I. S. LAHKANDER.

Much Impressed With Sweet 16.

Gloucester Co., N. J., Feb. 7, 1912.

Mr. J. T. Garrison,

Dear Sir:—After my visit to your place and inspecting your berries I was very much impressed with Sweet 16. This berry showed up well, considering the season, producing the largest plants I have ever seen and fruit was extra large and fine color. I believe them to be a great berry and shall plant them this year.

Yours respectfully,

T. WOOD WINE.

Plants Received O. K.

Columbia Co., N. Y., April 27, 1911.

J. T. Garrison & Sons,

The strawberry plants received all O. K. Would like you to send me 500 more as I ran short. Be sure and send nothing but Chesapeake. Enclosed find my check for same.

G. R. GREEN.

After Arrival of Plants, 6 Days,

Still in Good Condition to Set.

Gloucester Co., N. J., April 12, 1912.

J. T. Garrison & Sons,

Sirs:—I received those strawberry plants on the 6th inst., but did not get to set them until this afternoon. They were in fine condition. I was obliged to set them in another field, owing to so much rain of late, and they are enjoying a shower while I write. Please let me know of which variety are the large plants.

Very respectfully,

E. D. NORTON.

(Note—The large plants were the Sweet 16.)

Thanks for Extra Count.

Iowa, April 6, 1911.

J. T. Garrison & Sons,

Gentlemen:—The strawberry plants came to-day in first-class condition. Thanks for the extra count.

Yours truly,

I. W. PIGG.

Thanks for Prompt Attention.

Delaware, April 11, 1911.

J. T. Garrison & Sons,

Dear Sirs:—Plants arrived in good condition. Thanking you for prompt attention, I remain, Yours truly,

S. A. VIRIDIN.
